

# CHOOSE CORRECT WHEEL

## Be Sure to Choose the Correct Wheel for Your Application:

The floor surface and the type of wheel material used will have a definite effect on the performance of your equipment.

### Poly and Ultra-Poly Wheels

(The most common)

- Poly Wheels: Best for display floors, carpeting, and warehouses. They mark floors the least and roll easily and quietly.
- Ultra-Poly Wheels: Longer-lasting and roll more easily than regular Poly. Ultra-Poly is very hard and won't shatter like nylon. They are also non-marking.

### Nylon Wheels

Best for cold storage applications, and use in environments that may cause rust or corrosion.

### Steel Wheels

Best for use on factory floors where there may be metal shavings or debris, and where noise is not an issue.

## Steer Wheel Assemblies

Includes bearings, plus washers when applicable

Wesco	272748	WE 270135-ST	8" Diameter	Poly	Nylon	38.00

## Upgrade Upgrade Your Steer Wheels

What type of steer wheels does your pallet jack have?

Most have solid nylon wheels. Although we recommend nylon wheels for cold storage use, Ultra-Poly/Aluminum wheels will provide maximum life and performance for the majority of applications. Increase the life of your wheels by upgrading to longer-lasting materials.
